Fossil Fuel Energy & Power Generation

Hodge Foundry supplies the global energy and power generation industries with mission-critical cast components used in fuel processing and power generation equipment, including the full spectrum of traditional fossil fuel energy applications such as coal, oil and natural gas. We specialize in the manufacture of complex gray and ductile iron castings ranging from 3,000 to 200,000 lbs.

Energy & Power Generation

Specializing in traditional and renewable energy applications including:

Traditional/Fossil Energy:

- Coal processing equipment including grinding tables, pulverizing yokes and other mill components
- Oil and natural gas processing equipment including turbine housings, compressor cases, volutes, bearing housings and mud pumps

Renewable Energy:

- Wind turbine hubs, bedplates, gearbox housings and ancillary castings
- Hydropower sluice gates, turbine head covers, gate barrels and related components

Photos are not shown to scale.

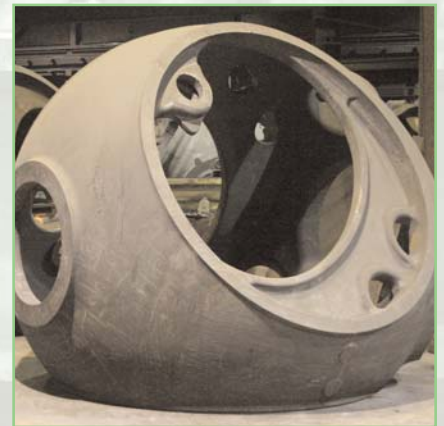

Oil and Gas Volute (60,000 lbs.)

Bearing Pedestal (6,000 lbs.)

Pump (11,000 lbs.)

Wind Turbine Hub (30,000 lbs.)

**Quality Castings
